Pool/Spa Chemicals
Material Safety Data Sheets (MSDS) Log

The MSDS documents contain safety information specific for each chemical and are available from chemical suppliers. The suppliers and manufacturers are required by law to supply these documents. Some manufacturers make the MSDS available on their web sites.

Iowa Swimming Pool and Spa Rules require:

- Copies of MSDS of the chemicals used at the swimming pool and/or spa are kept at the facility in a location known and readily accessible to facility staff.
- MSDS shall be reviewed with the facility staff at least annually; dates of review or training shall be recorded in the pool records.
- MSDS match the product labels. If chemicals are switched from one brand to another, obtain the MSDS for that specific brand.

Directions: Utilize this document to ensure that chemicals are matched with correct MSDS.
